

## Rubber Terrace Tile „SafeOne“

	„SafeOne25“	„SafeOne42“
<b>Dimensions</b>	1010 x 1010 mm	1010 x 1010 mm
<b>Thickness</b>	25 mm	42 mm
<b>Weight</b>	22 kg	30 kg
<b>Underbody</b>	flat, „water-drainage-canals“	„feet-structure“, similar to the design of an egg-carton

<b>Material</b>	Polyurethane bound rubber granules
<b>Standard Colours</b>	redbrown, green, black (black coloured granules)
<b>Special Colours 1</b>	blue, grey (black, coloured granules)
<b>Special Colour 2</b>	EPDM colours – or mix of such – see colour list
<b>Surface Design</b>	Cruciform-Design (optical effect of 50 x 50 cm tiles)
<b>Special Design</b>	Brick-effect, H-Block, No-Design, coloured design elements (dolphin, bear, leaf ..., corporate logo)

**Places of use:** terraces, club-terrace (e.g. golfing), walkways

**Installation/Assembling „SafeOne42“:** „SafeOne42“ ideally is to be fully adhered to the substrate (cement, asphalt, H-Blocks). On crushed gravel: Glue side to side with PU-Glue SH100 or other appropriate glue. Cutting by hand held utility knife or electric hand saw with a smooth blade. Pay attention to measurement tolerances prior to and while assembling.

**Installation/Assembling „SafeOne25“:** Install only on bound subgrounds with a slope, (e.g.cement, asphalt), water should be able to freely flow away from the area. SafeOne25“ must be fully adhered to the ground (cement, asphalt, H-Blocks). Placing the tile on crushed gravel or sand is not recommended.

**Recommended PU-glue:** Type 1174 or SH100. Amount of glue needed: Full adhesion with 1174: app. 350 gr./m<sup>2</sup>, Side-side gluing with SH100: app. 30 gr. / meter.

**Tolerances and note about material:** Tolerances in thickness: +/- 3 mm, \*Tolerances in measurement: +/- 2 %. Rubber-tiles react to changes in temperature and humidity. This reaction can mostly be prevented by fully adhering the tiles to the ground.
