

## EVA-Rubber Puzzlemat SoftFlex Sport

<i>Artikelnummer</i>	8FLEXS520 (grey) / 8FLEXS320 (blue) / 8FLEXS220 (red)
<i>Thickness</i>	20 mm (+ / - 2mm)
<i>Dimensions</i>	ca. 100 x 100 cm (+ / - 2%)
<i>Installation</i>	loose
<i>unit</i>	pcs. (1 m <sup>2</sup> )
<i>Weight / unit (kg)</i>	5,5 kg
<i>Surface structure</i>	raindrop design
<i>Bottom side</i>	flat
<i>Colour(s)</i>	grey, blue or red
<i>Material</i>	a unique mix of EVA foam and rubber
<i>Dimension tolerances</i>	length and width +/- 2%, thickness (+/- 2mm)
<i>Add ons</i>	Side ramps and corner ramps available – only in grey colour
<i>Places of use</i>	Fitness areas, under fitness equipment, body work outs
<i>Requirement to substructure</i>	Solid substructure (e.g.) cement
<i>Installation</i>	<p>Let mats adjust to room temperature for 24 hours. Place puzzle connectors over each other and step on the connectors – or use a rubber hammer. Use some kind of alignment to receive straight area outlines. Leave app. 1-2cm from each connecting wall since EVA-rubber tiles are likely to expand. Cut by using a fret saw or a carpenter knife.</p> <p>Floor temperatures above 40 degrees Celsius, as e.g a result of direct sunlight should be avoided (large glass fronts, glass roofs, ...) - the tiles will expand by more than 2% if exposed to such conditions.</p>
<i>Cleaning</i>	<p>Avoid great amounts of dirt on the rubber mat by using appropriate solutions in all entrance areas. The rubber mats can be vacuum / broom cleaned. If using water and a mild detergent make sure to only use a moist but not totally wet cloth. Too much water could be soaked under the mats.</p> <p>For the same reason, spilled liquids need to be removed in a timely manner.</p>
